

# Psychopathological Antecedents to Substance Use Disorders in Youth

Joseph Biederman, M.D.

Professor of Psychiatry

Massachusetts General Hospital  
Harvard Medical School

## Overlap between ADHD and Substance Use Disorders (SUDs)

Bidirectional overlap between ADHD & SUDs and smoking

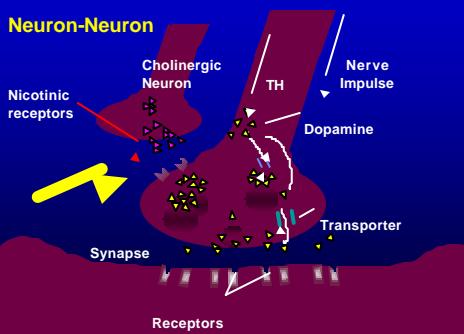

Wilens TE, Biederman J, et al. J Nerv Ment Dis. 1997 Aug;185(8):475-82.

## Is ADHD a Risk Factor for Smoking?

## ADHD and Nicotinic Receptors

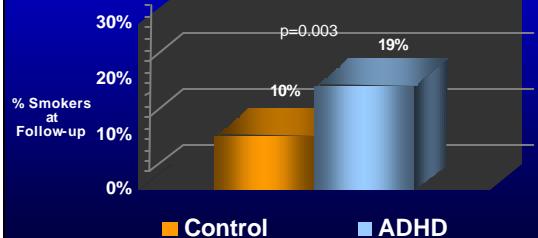

- The neurobiology of ADHD may involve deficits in cholinergic nicotinic receptors
- ADHD individuals may have genetic or acquired deficits in nicotinic cholinergic receptors

## Potential Areas of Neurochemical Manipulation: Treatment of ADHD with Cholinergic Agents

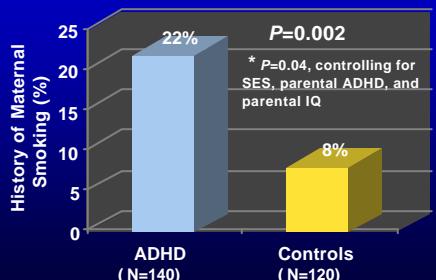

## ADHD and Smoking in Youth

Clinic-referred ADHD boys (n=128) and controls (n=109)  
ages 6 to 17 years followed prospectively for 4 years

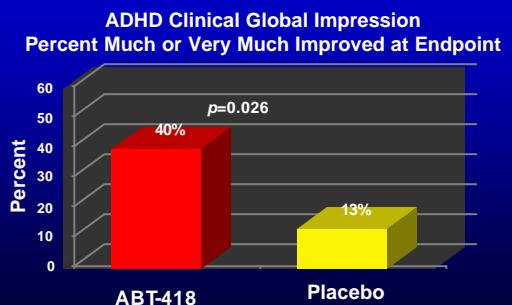

Milberger et al. JAACAP 1997;36:38.

## Maternal Smoking During Pregnancy: Results in Children

Milberger et al. Am J Psychiatry 1996;153:1138.

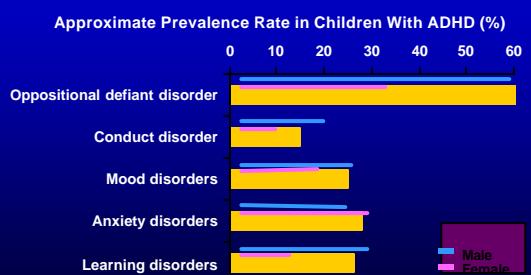

## MGH Study of ABT-418 for Adult ADHD

Wilens et al. Am J Psychiatry 1999;156:1931.

## Smoking and Comorbidity

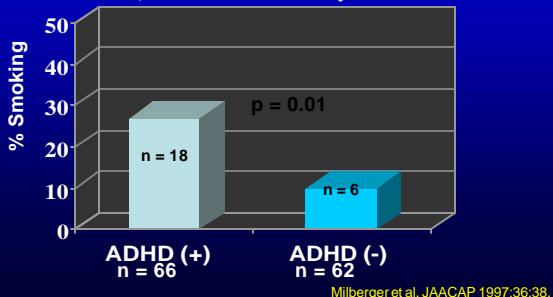

## ADHD: Childhood Common Comorbid Diagnoses

## SUD in Adult ADHD Psychiatric Comorbidity

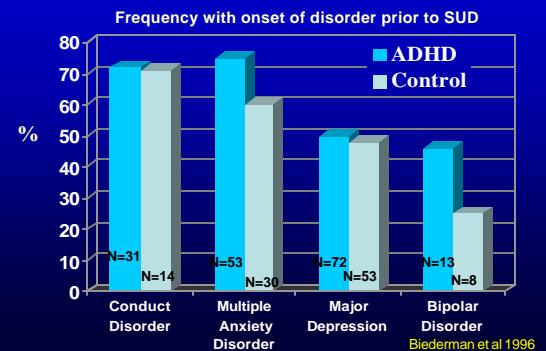

## SUD in ADHD Adults: Association with Number of Comorbid Psychiatric Disorders

## SUD in ADHD Adults: Increased Risk for SUD in Adults with ADHD and No Comorbidity

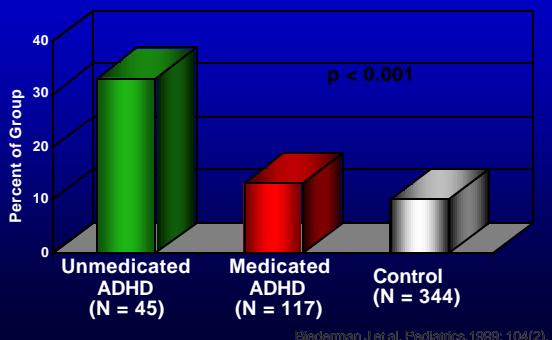

## Age of SUD Onset in ADHD and Control Adults

Is ADHD  
Pharmacotherapy  
a Risk Factor for  
Subsequent  
SUDs?

Myth - Stimulant Medication  
Causes Substance Abuse

## SUD in ADHD Youth Growing Up

Biederman J et al. Pediatrics. 1999; 104(2).

## Is ADHD Pharmacotherapy a Risk Factor For Subsequent Substance Abuse?

### Conclusions

- The bulk of studies indicate that in ADHD youth treated with medication (typically stimulants), there is a reduction in the risk of substance abuse.
- These data are particularly robust when treated and untreated groups are matched at baseline for severity of illness.
- These data are among the strongest within Child Psychiatry indicating the preventive influence of treatment on the development of substance abuse.

## Myth - Stimulant Medication Causes Substance Abuse

- Fact – Stimulant treatment lowers the risk of ADHD patients abusing alcohol and drugs

Wilens, Faraone, et al., *Pediatrics*, 2003

## ADHD + SUDs : Summary

- ADHD is a risk factor for cigarette smoking and SUDs
- Comorbidity increases smoking and SUDs risks
- Pharmacotherapy for ADHD reduces the risk of SUD in ADHD youth (association less clear with smoking)
- ADHD and comorbid disorders onset in childhood whereas smoking and SUDs onset in adolescence:
  - Opportunity for prevention and early intervention strategies
